norazhou0221@gmail.com | Providence, RI | linkedin.com/in/xinxin-zhou-706548261

EDUCATION

Brown University, M.S. in Data Science **Expected May 2027**
GPA: 4.0/4.0 | Coursework: Machine Learning, Deep Learning, Data Engineering, Computational Probability & Statistics, Automated Decision Systems

Emory University, B.S. in Quantitative Science (Economics Track) & B.A. in Psychology **Aug. 2021 - Dec. 2024**
GPA: 3.95/4.0 | Coursework: Probability & Statistics, Machine Learning, NLP, Micro/Macroeconomics

SKILLS

Languages: SQL, Python (Pandas, NumPy, Scikit-learn), R, SAS, Stata
Analytics: A/B Testing, Funnel Analysis, Customer Segmentation, KPI Reporting, Regression, Causal Inference, Predictive Modeling (XGBoost, Random Forest)
Tools & Platforms: Tableau, Power BI, Excel, Apache Spark, TikTok Ads, Alibaba e-commerce analytics

PROFESSIONAL EXPERIENCE

Data Analyst Intern, I.T Group (I.T Apparels Limited), Shanghai, China **May - Aug. 2025**

- Cleaned and managed 50K+ transaction records with SQL and Excel; built a daily sales reporting workflow with weekly/monthly business reviews, and developed Power BI dashboards tracking seasonal sales trends, core KPIs, and category performance.
- Supported creative testing for a BAPE co-branded product launch, comparing CTR, subscription conversion, and engagement across new vs. returning customers; found new customers more responsive to collaboration, limited-edition, and release-date messaging, informing a segmented content strategy.
- Analyzed the brand's RedNote and TikTok accounts by content theme, engagement, and audience preference; partnered with the marketing team to refine topic selection, lifting follower growth rate by ~40% over the prior period.

Data Analyst Intern, Shanghai Lianwei Data Technology Co., Ltd., Shanghai, China **May - Aug. 2024**

- Extracted and cleaned search-term, store sales, and market data from Alibaba and TikTok e-commerce and ad analytics platforms for mid-year sales festival and Father's Day campaigns; built customer personas and brand, category, and competitor analyses, delivering daily/monthly reports for campaign decisions.
- Benchmarked ad performance (CTR, ROI) against the market and ran A/B tests on TikTok ad targeting, improving precision and raising conversion among price-sensitive users by 3%.
- Mapped the click, product page, add-to-cart, and purchase funnel with SQL and Tableau, identifying product page to add-to-cart as the largest drop-off; combined traffic-source and behavior analysis to recommend surfacing promotions and key selling points earlier on the page.

RESEARCH & PROJECTS

Research Assistant, Biostatistics, Brown University, Providence, RI **Jun. 2026 - Present**

- Built an automated analysis framework (4 biomarkers $\times$ 3 outcomes $\times$ 2 model types) in R and SAS for a prostate cancer clinical trial, producing 24 analyses with standardized outputs; identified the only biomarker significantly predicting progression-free survival (HR=1.42, p=0.026).
- Owned the analysis end to end, from dataset identification, population definition, and outlier detection to sensitivity analyses validating robustness; delivered statistical reports and publication-ready figures to the PI.
- Integrated multi-source data (imaging, lab, clinical) for an Alzheimer's study, building patient ID crosswalks, visit matching, and QC workflows to create an analysis-ready database.

Socioeconomic Disparities in Cardiac Care (2022 National Inpatient Sample) **Dec. 2025 - Feb. 2026**

- Built survey-weighted logistic regression on national inpatient data; found privately insured patients 1.8x more likely (p=0.035) than Medicare patients to receive ICDs; manuscript in preparation.

In-Hospital Mortality Prediction (SUPPORT2 Dataset) **Oct. - Dec. 2025**

- Benchmarked XGBoost, Random Forest, SVM, and logistic regression in Python; handled heavy missingness with pattern-specific submodels and 5-fold cross-validation, with XGBoost achieving the best AUC and F1.
